**GCI ConnectMD® Announces Partnership with iSALUS Healthcare™
Collaboration to provide OfficeEMR™ to the Pacific Northwest**

SEATTLE - GCI (NASDAQ: GNCMA) today announced an agreement with iSALUS Healthcare to provide a new way for physicians, clinics and hospitals to adopt electronic medical records (EMR) systems while addressing clinical and business needs. The collaboration makes iSALUS Healthcare's CCHIT 2006 CertifiedSM OfficeEMRTM 2007 available to the healthcare community in Washington and Alaska. OfficeEMR will be supported over the GCI ConnectMD® network, the largest private medical network in the Pacific Northwest comprised of over 140 clinics, hospitals, and medical facilities.

OfficeEMR is a subscription-based, enterprise class software service that provides full practice management, EMR, and document management functionality to physicians and administrative staff. Designed to help healthcare organizations focus on providing optimal patient care experiences while improving operations and financial performance, OfficeEMR enables physician groups to computerize all facets of their practices with a single, easily managed solution.

"We're thrilled to partner with iSALUS Healthcare to provide our current and prospective customers with efficient, cost effective solutions," said Martin Cary, Vice President and General Manager of GCI Managed Broadband Services. "GCI ConnectMD shares iSALUS Healthcare's vision of enabling medical communities to access affordable technology and enjoy the flexibility to practice how, where, and when they choose."

OfficeEMR also provides ChartShareMD, a service allowing physicians to share pertinent clinical information with any other clinician, regardless of location or the receiving physician's EMR/practice management system. This shared access approach to interoperability is HIPAA compliant and patient information is protected at all times. Because iSALUS is web-based, health care providers have full access to their data from any location at any time.

- - more- -

OfficeEMR 2007's CCHIT 2006 Certification from the Certification Commission for Healthcare Information Technology means that OfficeEMR 2007 meets CCHIT ambulatory electronic health record (EHR) criteria. CCHIT sets the benchmark for EHRs, and is a Recognized Certification Body for the certification of health information technology products.

"iSALUS is committed to delivering creative and cutting edge solutions to our customers and the communities we serve," said Mark Day, CEO of iSALUS Healthcare. "Partnering with GCI allows us to broaden our reach to health care providers already familiar with the benefits of a reliable and secure network from ConnectMD. Technology should lower costs and expand access, and we are doing that with GCI ConnectMD."

About GCI and ConnectMD

As a publicly traded company with more than 25 years of experience and nearly \$500 million in revenue, GCI and its ConnectMD medical services team contribute medical networking expertise and significant technical resources to their members. GCI is the largest Alaska-based and operated integrated telecommunication provider. A pioneer in bundled services, GCI provides local, wireless, and long distance telephone, cable television, Internet and data communication services. More information about the company can be found at www.gci.com.

GCI ConnectMD is a network of 140+ clinics, hospitals, and medical facilities across Washington and Alaska. The ConnectMD network supports medical business operations and the secure exchange of medical data with an expanding list of partner organizations, including: Virginia Mason Medical Center, Children's Hospital in Seattle, Alaska Regional Medical Center, Alaska Psychiatric Institute and other leading medical facilities.
